

Addendum to the Cultivation and Operations Plan

– Immature plant greenhouse location

HEALING SUN FARM

APN#: 220-082-020

App# 12072

05/04/2020

The pre-2016 immature plant propagation area was 2,000 sq. ft. and located in greenhouse #8 below. Applicant proposes a 1,900 sq. ft. greenhouse within the pre-existing cultivation area labeled as greenhouse #10 below.

This will not be used for flowering, will not require grading, will use a simple metal hoop construction, and will be covered to prevent night time light pollution. Please see updated site plan for details.

The proposed greenhouse will allow the applicant to separate the immature plant greenhouse from the previous configuration within the flowering greenhouse #8. This will remove the supplemental lighting from the flowering greenhouse to meet the needs of regulators and consolidate uses for pest management and plant care needs.
