Project Description

This Conversion Exemption proposes to convert timberland into agriculture and new road. Per the Humboldt County General Plan, the conversion exemption area is presently zoned Timber Production (TPZ). Humboldt County's Grading and Open Space Ordinance does not apply to this project because the conversion exemption area is zoned TPZ, and the property is greater than 3 acres in size. Consequently, Item 6 is not signed by the County's designee. The RPF has attached an e-mail from Humboldt County Planning, which states that no County review is required for Less Than 3-Acre Conversion Exemptions on TPZ lands.

Addendum 14CCR 1104.1(a)(1)(E)(1-4)

The timberland owner has certified via his signature, under penalty of perjury, that this is a one-time conversion to Agriculture and new road. The timberland owner understands that a "Bona Fide Intention or bona fide intent" is a present, sincere intention of the applicant to conform with and successfully execute the conversion plan, as determined by the Director in accordance with provisions of Sec. 1105.2 (Ref.: Sec. 4623, PRC).

Addendum 14CCR 1104.1(a)(2)(F)

The conversion area does not include any watercourses and is not located within a WLPZ or Class III ELZ.

Addendum 14CCR 1104.1(a)(6)

The extent of the vegetation removal and site preparation required for the conversion;

The conversion area consists of second growth tanoak and Douglas-fir. The conversion area will require timber harvesting, site preparation, and treatment of logging slash and woody debris (see requirements proceeding page). Following timber harvesting, excavation and grading are expected to be needed to successfully convert the site to the stated uses.

The suitability of soils, slope, aspect, and microclimate for the stated non-timber use;

The conversion exemption area's slopes are gentle with an aspect favorable for agriculture. The soils are inadequate for agriculture but grow medium is imported and therefore not a limiting factor. The new road utilizes existing skid road segments, which helps minimize loss of timberland. The new road is located on the gentlest slopes available given the constraints of property boundaries and other physical limitations.

Addendum 14CCR 1104.1(a)(2)(D) - Treatment of Logging Slash and Woody Debris.

1. Unless otherwise required, slash greater than one inch in diameter and greater than two feet long, and woody debris, except pine, shall receive full treatment no later than April 1 of the year following its creation, or within one year from the date of acceptance of the conversion exemption by the Director, whichever comes first.
2. All pine slash three inches and greater in diameter and longer than four feet must receive initial treatment if it is still on the parcel, within 7 days of its creation.
3. All pine woody debris longer than four feet must receive an initial treatment prior to full treatment.
4. Initial treatment shall include limbing woody debris and cutting slash and woody debris into lengths of less than four feet, and leaving the pieces exposed to solar radiation to aid in rapid drying.
5. Full treatment of all pine slash and woody debris must be completed by March 1 of the year following its creation, or within one year from the date of acceptance of the conversion exemption by the Director, whichever comes first.
6. Full slash and woody debris treatment may include any of the following:
 - a. Burying;
 - b. Chipping and spreading;
 - c. Piling and burning; or
 - d. Removing slash and woody debris from the site for treatment in compliance with (a)-(b). Slash and woody debris may not be burned by open outdoor fires except under permit from the appropriate fire protection agency, if required, the local air pollution control district or air quality management district. The burning must occur on the property where the slash and woody debris originated.
7. Slash and woody debris, except for pine, which is cut up for firewood shall be cut to lengths 24 inches or less and set aside for drying by April 1 of the year following its creation. Pine slash and woody debris which is cut up for firewood shall be cut to lengths 24 inches or less and set aside for drying within seven days of its creation.
8. Any treatment which involves burning of slash or woody debris shall comply with all state and local fire and air quality rules.

WINTER OPERATING PLAN

1. The erosion hazard rating for the conversion exemption area is moderate.
2. Mechanical site preparation is proposed.
3. The yarding system for the conversion exemption is ground based.
4. This Winter Operating Plan is for all timber operations occurring from October 15 to May 1.
5. No watercourses occur in the conversion exemption area. Class II and III Watercourses are located downstream however.
6. Use of logging roads, tractor roads, or landings shall not take place at any location where "Saturated Soil Conditions" exist, where a "Stable Operating Surface" does not exist, or when visibly turbid water from the road, landing, or skid trail surface or inside ditch may reach a watercourse or lake.
7. No unstable areas occur within or nearby the conversion exemption area.
8. Winter Operations Restrictions:
 - a. Logging roads, landings or tractor roads shall not be used when visibly turbid water from the road, landing or tractor road (skid trail) or an inside ditch associated with the logging road, landing or tractor road may reach a watercourse or lake in amounts sufficient to cause a turbidity increase in Class I, II, III or IV waters.
 - b. Log hauling on logging roads and landings shall be limited to those which are hydrologically disconnected from watercourses to the extent feasible, and exhibit a stable operating surface.
 - c. Concurrent with use for log hauling, approaches to logging road watercourse crossings shall be treated for erosion control as needed to minimize soil erosion and sediment transport and to prevent the discharge of sediment into watercourses and lakes in quantities deleterious to the beneficial uses of water.
 - d. Concurrent with use for log hauling, all traveled surfaces of logging roads in a WLPZ or within any ELZ or EEZ designated for watercourse or lake protection shall be treated for erosion control as needed to minimize soil erosion and sediment transport and to prevent the discharge of sediment into watercourses and lakes in quantities deleterious to the beneficial uses of water.
 - e. Grading to obtain a drier running surface more than one time before reincorporation of any resulting berms back into the road surface is prohibited.
 - f. Unless the winter period operating plan proposes operations during an extended wet weather period with low antecedent soil wetness, no tractor roads shall be constructed, reconstructed, or used on slopes that are over 40 percent and within 200 feet of a Class I, II, or III watercourse, as measured from the watercourse or lake transition line during the extended wet weather period.
 - g. Logging roads, landings and tractor roads shall not be used when sediment from the logging road, landing or tractor road surface is transported to a watercourse or a drainage facility that discharges into a watercourse in amounts sufficient to cause a visible increase in turbidity in Class I, II, III, or IV waters.
 - h. Logging roads and landings shall not be used for log hauling when saturated soil conditions result in the visible increase in turbidity specified in Class I, II, III, or IV waters.

WINTER OPERATING PLAN (CONT.)

- i. **SATURATED SOIL CONDITIONS:** means that soil and/or surface material pore spaces are filled with water to such an extent that runoff is likely to occur. Indicators of saturated soil conditions may include, but are not limited to: (1) areas of ponded water, (2) pumping of fines from the soil or road surfacing material during timber operations, (3) loss of bearing strength resulting in the deflection of soil or road surfaces under a load, such as the creation of wheel ruts, (4) spinning or churning of wheels or tracks that produces a wet slurry, or (5) inadequate traction without blading wet soil or surfacing materials.
- j. **STABLE OPERATING SURFACE:** means a road or landing surface that can support vehicular traffic and has a structurally sound road base appropriate for the type, intensity and timing of intended use.
