## Building Code Compliance

The Units are being constructed, at additional cost, to R-1 rather than R-2 under the CBC & CBC Existing Building Code.

**Residential Group R-1 occupancies** contain sleeping units where the occupants are primarily transient in nature, including: Hotels (transient)

**Residential Group R-2 occupancies** containing sleeping units or more than two dwelling units where the occupants are primarily permanent in nature, including: Apartment houses, ...Hotels (nontransient), ...Vacation timeshare properties

Due to the Transient differentiation of Group R-1 Occupancies over non-transient R-2, they require, among other things, increased Fire Sprinkler Type (Full System), increased Occupancy and Unit Separation Walls, Floors & Ceilings Fire-Rating time, and shorter Egress Travel Distances.

*We are spending more on the conversion to make it R-1 compliant.*
