**Antimicrobial Surface Coating Applied at Bear River Casino Resort as Part of Aggressive Health and Safety Program.**

- TruClean kills 99.99% of bacteria and viruses and controls the growth of bacteria, mold and mildew on all surfaces for up to a year.
- It is a safe, non-toxic, non-leaching invisible barrier that microbes cannot live on.
- TruClean is a significant initiative that is part of Bear River Casino's rigorous health and safety program.

LOLETA / CA – MAY 22, 2020: As part of Bear River Casino Resort's extensive health and safety program, we have partnered with TruClean which uses an antimicrobial surface protectant that stops the growth of microorganisms for up to a year with a single application, throughout the entire casino. Bear River Casino is the first local casino to take this extra precautionary measure in an effort to protect the health and safety of our guests and team members.

All touch points within the Casino were coated on Monday, May 18<sup>th</sup> with TruClean's invisible, non-toxic, self-cleaning coating that prevents the growth of bacteria, viruses and other microorganisms, creating a safer experience for valued guests. This includes all gaming machines, table games, kiosks, door handles, chairs, countertops and other areas.

Bear River has always taken great pride in maintaining a clean and fun environment and will continue researching new and effective ways to further enhance our cleaning and sanitation protocols.

**About TruClean**

San Diego-based TruClean uses the latest technology to chemically bond its antimicrobial coating to the surfaces it is applied to. The long-lasting coating works immediately after application, neutralizing microbes on contact and creating self-cleaning surfaces that work 24/7. TruClean's active ingredient is EPA registered and stabilized with proprietary ingredients to deliver high performance bonding capability. The coating contains a unique molecule that is like a microscopic sword. When microbes contact the surface, they are pierced and eliminated.

Where most commercial products are effective only when wet, TruClean is continuously working and is not removed by routine cleaning processes. The TruClean surface coating functions as a semi-permanent disinfectant that lasts for up to one year without washing off a surface. While approved as a long-lasting disinfectant in multiple international markets, TruClean is a Treated Article under US FIFRA regulations.
